WHAT IS SPLYT's eNFT?

Splyt's eNFT (E-commerce-Non-Fungible-Token) tokenizes off-chain products on the blockchain. This streamlines digital sales and enables lifetime product data tracking not previously possible. The eNFT empowers a transparent e-commerce ecosystem.

eNFT INVENTORY CATALOG

Every product is assigned a unique eNFT which eliminates the double-sell problem with live-updating inventory tracking across all online stores.

eNFT Data

The eNFT acts as a digital ledger of authentic metadata and delivers data points across the lifetime of a product in the resale market.

eNFT BOUNTY MARKETPLACE

Brands set a bounty for each eNFT that is traced and paid on the blockchain for perfect attributions and eliminates counter-party risk.

eNFT OFF-CHAIN DEFI

DeFi pools for collateralized inventory represented on the blockchain as eNFTs and verified via decentralized warehouses.
